

What is a Passkey?

A passkey is a safer, faster way to log in—no password needed!

- Your phone or computer remembers the passkey for you.
- You log in using Face ID, fingerprint, or your device's unlock PIN.
- It works on websites and apps and syncs across your devices.
- Even if your password changes, your passkey still works!

It's like a digital key stored safely on your device.

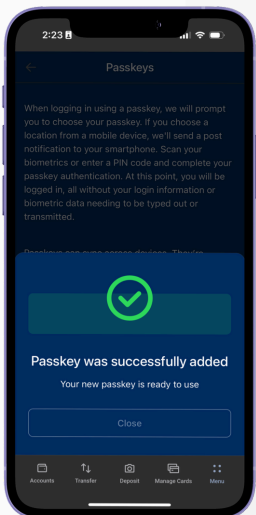

How to Use a Passkey

Step 1: Tap "Create a new passkey" when prompted

- When you log in, you may see a screen titled **"Improve security using a passkey."**
- Tap the "Create a new passkey" button to get started.

Step 2: Add a Passkey

- Use apps like Apple Passwords (iCloud Keychain) or Google Password Manager.
- Follow the prompts on your phone to add the passkey.

Step 3: Confirm Your Identity

You'll be asked to confirm it's really you by using:
Face ID, Fingerprint, Or PIN

This makes sure no one else can create a passkey on your device.

Step 4: You're all set!

- Once authentication is complete, your passkey is created.
- Next time you log in, you can skip typing a password and just use your device's biometric method.
- It's fast, secure, and synced across all your devices.
